

Duration: ½ Day

Who should attend?

Steelwork designers who are already users of the SuperSTRESS software; or who have attended the 1 day Analysis and Modelling Training and would like to increase their knowledge to include the steelwork design module. The training will give a complete overview of all the features and options available to the designer allowing them to free up more time by increasing their skill and efficiency in using the software.

Prerequisites:

No previous CAD experience is necessary. However, design and engineering experience is recommended. It is also recommended that you have a working knowledge of Microsoft Windows XP, or Microsoft Windows Vista.

Course Topics

-  Use and control of tabular input – for quick input of repetitive data
-  Graphical manipulation of the model
-  Simple connections
-  Concatenated members
-  Single element design
-  Cyclic analysis and design
-  Common mistakes and problems to avoid
-  Technical support – options and availability for the quickest response times
-  Other modules available and future development plans.

Training will be partly lecture format with worked examples (your own if you pass them to us in advance); training notes and hands-on usage promote confidence in using the software.
